

## Final Project Report

### CS2132 Final Project Summary

**INSTRUCTIONS:** Type out your answer directly below each question. If a question does not apply to your project, type in N/A. When finished, save this file as a PDF and upload it to the Blackboard.

#### BASICS

**Your group members?**

Rahaf Banat - S21107380 Taif Alsulami - S20206964

**What is the topic of your final project?**

We've created a company called GlowUP for our project. GlowUP manages a clothing company with administrative employees. For the graphical user interface (GUI), we've designed a "create account" feature, allowing users to create accounts and buy products, add them to their bags, and checkout.

**Who is the intended audience?**

Everyone would like to buy clothes.

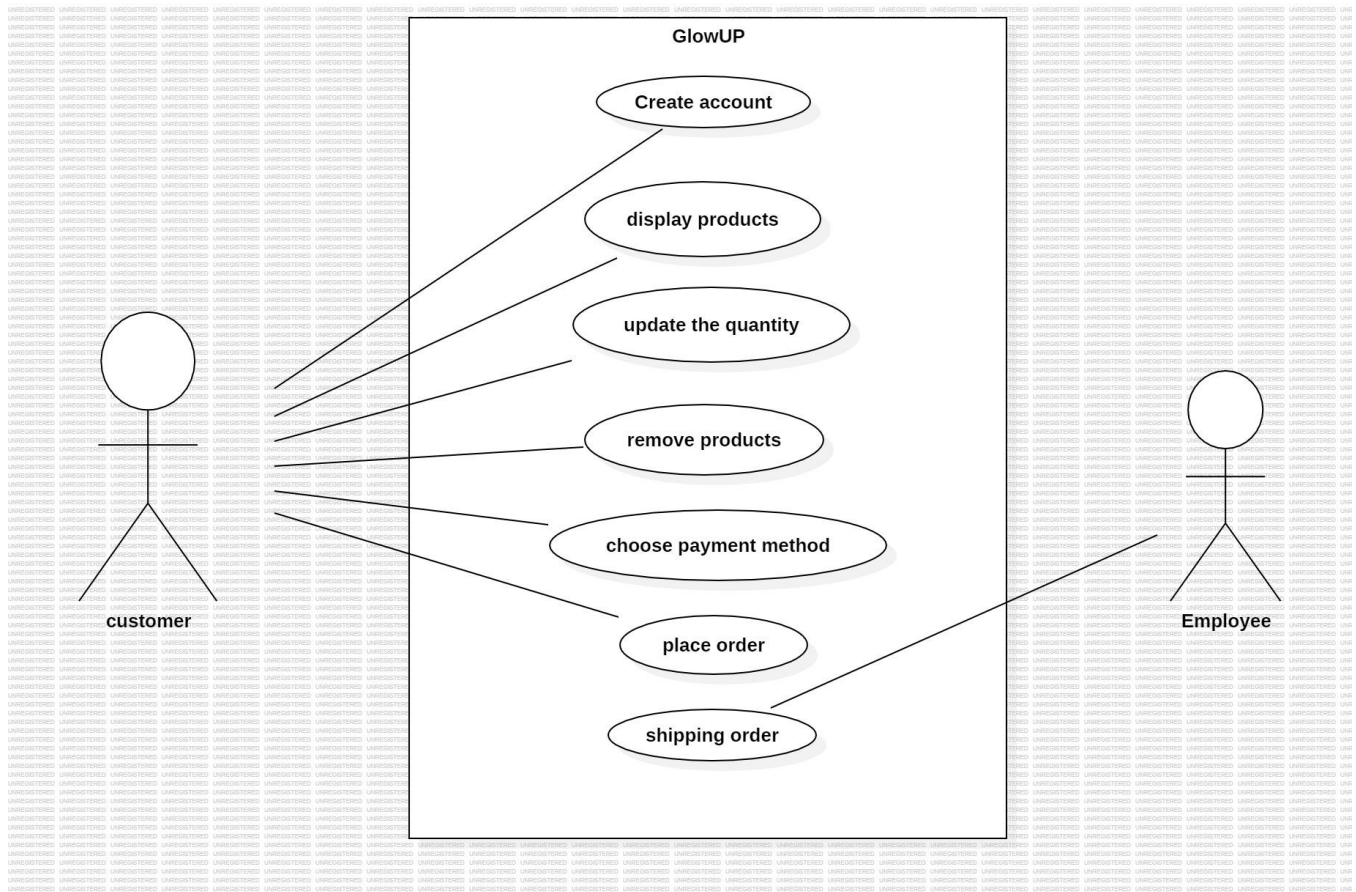

**Provide a summary of the functionalities of your project.**

The code demonstrates various aspects of a company called "GlowUp." It creates instances of different classes such as Company, Administration, Employee, Customer, Clothes, PaymentMethod, Service, Shipping, Online, Shop, and Order to simulate different functionalities and interactions within the company. It showcases features like company information display, employee and customer details, clothes information, payment methods (credit card and cash), order processing, and customer services. The code provides an example scenario to illustrate the usage and functionality of these classes and their methods within the GlowUp company. The given Java code implements a GUI application for an online shopping system called "GlowupApp." It allows users to create an account, browse products, add items to their shopping bags, proceed to checkout, and make payments. The application includes account creation, product display, shopping bag, and checkout pages, each with corresponding functionalities such as input validation, quantity selection, and payment method selection. It provides a basic framework for users to interact with the online shopping system and complete their purchases through a user-friendly graphical interface.

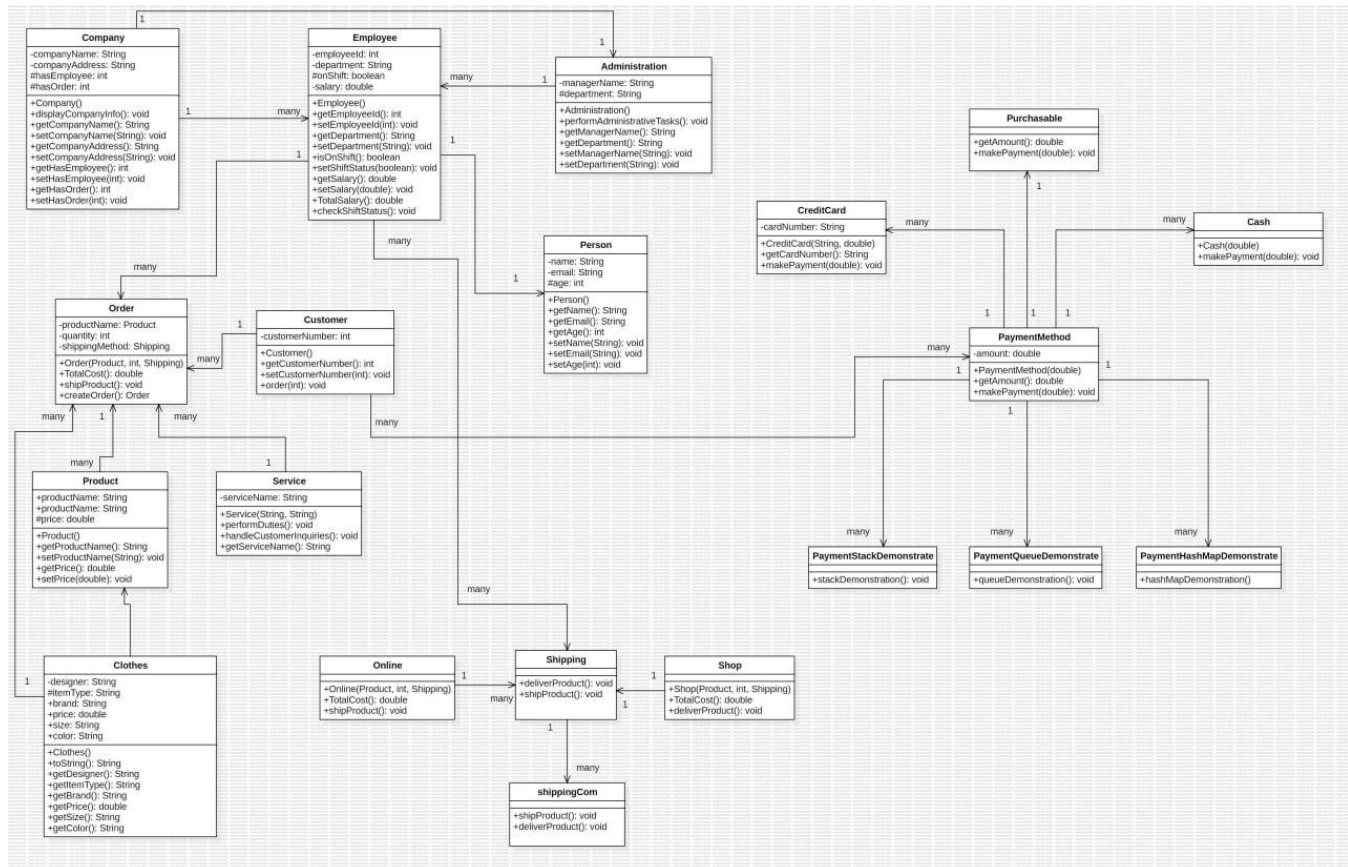

#### System Design

## Final Project Report

(Include UML diagrams of your system design below. Include all the diagrams you have made and any other artifacts you have created.)

Screenshots

## Final Project Report

(Include screenshots of your project working below. Make sure you include screenshots to demonstrate all the functionality and features of your project.)
